

UNIT-2

Relational Operator

Relational Algebra

- A collection of operators for manipulating relations
- A relation is a set of tuples
- The result of each relational algebra expression is a relation
- For this discussion we will strictly following the definition of a set so there will be no duplicate tuples in a relation
- We will relax this constraint when we talk about relational algebra in the context of query processing

Fundamental Operations in Relational Algebra

- Selection Operator (σ)
- Projection Operator (Π)
- Union Operator (\cup)
- Intersection Operator (\cap)
- Cartesian Product (\times)
- **Difference (-)**

Unary Relational Operations

SELECT and PROJECT

The SELECT Operation:

- The SELECT operation is used to choose a *subset* of the tuples from a relation that satisfies a **selection condition**.
- The SELECT operation is denoted by $\sigma \langle \text{selection condition} \rangle (R)$ where the symbol σ (sigma) is used to denote the SELECT operator.
- The selection condition is a Boolean expression (condition) specified on the attributes of relation R .
 - $\sigma \text{ Dno}=4(\text{EMPLOYEE})$
 - $\sigma \text{ Salary}>30000(\text{EMPLOYEE})$

No.

Where Dno is Department

- $\langle \text{comparison op} \rangle$ is normally one of the operators $\{=, <, \leq, >, \geq, \neq\}$.
- Clauses can be connected by the standard Boolean operators *and*, *or*, and *not* to form a general selection condition.

Selection (σ)

DBMS

| eno | ename | sal | desig |
|------|-------|------|-------|
| IT1 | ALI | 500 | TUTOR |
| BUS2 | AHMED | 1000 | HEAD |
| IT2 | SABA | 400 | CLERK |
| IT3 | SALEH | 500 | TUTOR |
| BUS1 | BADER | 650 | TUTOR |

σ (employee) - it will select rows having salary > 500
 $sal > 500$

| eno | ename | sal | desig |
|------|-------|------|-------|
| BUS2 | AHMED | 1000 | HEAD |
| BUS1 | BADER | 650 | TUTOR |

PROJECTION

- ❁ In relational algebra, a projection is a unary operation written as $\pi_{a_1, \dots, a_n}(R)$ where a_1, \dots, a_n is a set of attribute names.
- ❁ The result of such projection is defined as the set that is obtained when all tuples in R are restricted to the set $\{a_1, \dots, a_n\}$.
- ❁ Example:

Person

| Name | Age | Weight |
|--------|-----|--------|
| Harry | 34 | 80 |
| Sally | 28 | 64 |
| George | 29 | 70 |
| Helena | 54 | 54 |
| Peter | 34 | 80 |

$\pi_{\text{Age, Weight}}(\text{Person})$

| Age | Weight |
|-----|--------|
| 34 | 80 |
| 28 | 64 |
| 29 | 70 |
| 54 | 54 |

DISTINCT

Example - Projection

- × Produce a list of salaries for all staff, showing only staffNo, fName, lName, and salary details.

$\Pi_{\text{staffNo, fName, lName, salary}}(\text{Staff})$

| staffNo | fName | lName | salary |
|---------|-------|-------|--------|
| SL21 | John | White | 30000 |
| SG37 | Ann | Beech | 12000 |
| SG14 | David | Ford | 18000 |
| SA9 | Mary | Howe | 9000 |
| SG5 | Susan | Brand | 24000 |
| SL41 | Julie | Lee | 9000 |

Set Based: UNION, INTERSECTION, DIFFERENCE

Figure 6.4

The set operations UNION, INTERSECTION, and MINUS. (a) Two union-compatible relations. (b) $\text{STUDENT} \cup \text{INSTRUCTOR}$. (c) $\text{STUDENT} \cap \text{INSTRUCTOR}$. (d) $\text{STUDENT} - \text{INSTRUCTOR}$. (e) $\text{INSTRUCTOR} - \text{STUDENT}$.

(a) STUDENT

| Fn | Ln |
|---------|---------|
| Susan | Yao |
| Ramesh | Shah |
| Johnny | Kohler |
| Barbara | Jones |
| Amy | Ford |
| Jimmy | Wang |
| Ernest | Gilbert |

INSTRUCTOR

| Fname | Lname |
|---------|---------|
| John | Smith |
| Ricardo | Browne |
| Susan | Yao |
| Francis | Johnson |
| Ramesh | Shah |

(b)

| Fn | Ln |
|---------|---------|
| Susan | Yao |
| Ramesh | Shah |
| Johnny | Kohler |
| Barbara | Jones |
| Amy | Ford |
| Jimmy | Wang |
| Ernest | Gilbert |
| John | Smith |
| Ricardo | Browne |
| Francis | Johnson |

(c)

| Fn | Ln |
|--------|------|
| Susan | Yao |
| Ramesh | Shah |

(d)

| Fn | Ln |
|---------|---------|
| Johnny | Kohler |
| Barbara | Jones |
| Amy | Ford |
| Jimmy | Wang |
| Ernest | Gilbert |

(e)

| Fname | Lname |
|---------|---------|
| John | Smith |
| Ricardo | Browne |
| Francis | Johnson |

SET DIFFERENCE operation

Example

(a) STUDENT

| Fn | Ln |
|---------|---------|
| Susan | Yao |
| Ramesh | Shah |
| Johnny | Kohler |
| Barbara | Jones |
| Amy | Ford |
| Jimmy | Wang |
| Ernest | Gilbert |

INSTRUCTOR

| Fname | Lname |
|---------|---------|
| John | Smith |
| Ricardo | Browne |
| Susan | Yao |
| Francis | Johnson |
| Ramesh | Shah |

(d)

| Fn | Ln |
|---------|---------|
| Johnny | Kohler |
| Barbara | Jones |
| Amy | Ford |
| Jimmy | Wang |
| Ernest | Gilbert |

(e)

| Fname | Lname |
|---------|---------|
| John | Smith |
| Ricardo | Browne |
| Francis | Johnson |

STUDENT - INSTRUCTOR

INSTRUCTOR - STUDENT

Suppose names of people are distinct

(d) RESULT=INSTRUCTOR - STUDENT

(e) RESULT=STUDENT - INSTRUCTOR

SQL for previous example Fig 6.4:

(SELECT Fn, Ln FROM STUDENT)

MINUS

(SELECT Fname, Lname FROM INSTRUCTOR);

UNION

UNION ALL

INTERSECT

EXCEPT/MINUS

UNION operator returns all the unique rows from both the left and the right query. UNION ALL includes the duplicates as well

INTERSECT operator retrieves the common unique rows from both the left and the right query

EXCEPT operator returns unique rows from the left query that aren't in the right query's results

CARTESIAN PRODUCT example

R

| | |
|---|---|
