# Routing

1. While creating a project you have accept routing during initilaization.
2. Add atleast  2-3 components in the project like we have added two components like **home , about**
   to add component ( **ng g c component_name**)

3. **app-routing.module.ts**

   import { HomeComponent } from './home/home.component';

   import { AboutComponent } from './about/about.component';

   **the above two lines you can copy from app.module.ts also**

   const routes: Routes = [

   **{path:'home',component:HomeComponent},**

   **{path:'about',component:AboutComponent}**

   ];

4. Add some data in both the components html file.

5. **app.component.html**

   <a routerLink = "home">Home</a> <br>

   <a routerLink = "about">About</a>
